- Builder.ai
- Material UI
- Bootstrap
- Redux (Basic)
- GitHub
- API Integration
- Testing Library
- Tailwind CSS
- Responsive UI
  Design
- Code Versioning

PROFILE

I am a skilled web developer who enjoys creating visually appealing and functional websites. I have 1.5 years of experience, mainly in front-end development, where I use HTML, CSS, and JavaScript to turn designs into websites. I am always learning and keeping up with the latest trends in web development. My goal is to grow as a developer and help build websites that provide great user experiences.

WORK EXPERIENCE

JUNIOR DEVELOPER | Bluesoft Infotech
August 2023 - Current

Builder.ai & Other Projects
After completing my internship at Bluesoft InfoTech, I joined Builder.ai as a Junior Developer. I work on different software development projects, both for Builder.ai and other client-based projects, creating custom software solutions using modern technologies.

- Develop custom software solutions for Builder.ai and clients using React.js and TypeScript.
- Work closely with designers, project managers, and developers to meet project goals and deadlines.
- Review code to ensure best practices are followed and documentation is up to date.
- Continuously enhance skills by learning new technologies and contributing to process improvements.

INTERN | Bluesoft Infotech
March 2023 - July 2023

During my internship at Bluesoft InfoTech, I worked on building and updating websites using HTML, CSS, JavaScript, and React.js. I contributed to creating responsive and user-friendly interfaces, improving website functionality, and enhancing user experience. This experience helped me gain hands-on skills in modern front-end development.

PROJECTS

BOOK ARCHIVE | Sem- 5
Link: - *https://book1512.github.io/eBook/*

Developed an e-book platform designed to provide free access to a limited selection of digital books, promoting simplicity and sustainability. Users can read ebooks without any paid membership, and if they wish to purchase physical copies, they can be directed to Amazon.in. The platform also features author information to enhance reader engagement and promote literacy.

Currently, users cannot create accounts, add books to a wishlist, or suggest new books. These features are planned for future updates to enhance user experience. As the sole developer, I was responsible for adding new books to the archive and ensuring the platform's smooth operation. The project emphasizes environmental sustainability by offering a digital alternative to physical books.

STAR EVENT - Online Event Management System | Sem- 6

Developed an online event management platform to simplify the booking and management of events like weddings, parties, and concerts. The platform allows users to browse packages, book services, and access additional offerings such as decorations at competitive prices. It also includes client feedback for continuous service improvement.

Key Features:
- **Event Booking:** Allows users to view and book event packages online.
- **Customization:** Offers additional services like event decorations.
- **Client Feedback:** Collects feedback to enhance future services.
- **Admin Panel:** Admins manage bookings, customer details, and inquiries.

Technologies Used: [Include technologies used such as HTML, CSS, JavaScript, PHP, MySQL, etc.]
